TABLE OF CONTENTS

- 1.0 Discussion**

- 2.0 Guide to Compatibility Key**

- 3.0 Chemical Compatibility Guide for Commonly Used Elastomers for O-Rings**

- 3.1.0 Chemical Compatibility Guide for Ethylene Propylene**

- 3.1.1 Chemical Compatibility Guide for Fluorosilicone**

- 3.1.2 Chemical Compatibility Guide for Nitrile (Buna N)**

- 3.1.3 Chemical Compatibility Guide for Silicone**

The information, descriptions, recommendations, and opinions set forth herein are offered solely for your consideration, inquiry, and verification and are not, in part or in whole, to be construed as constituting a warranty, expressed or implied, nor shall they form or be a part of the basis of any bargain with BAL® Seal Engineering. If any sample or model was shown to or provided by Buyer/User, such sample or model was used merely to illustrate the general description and type of goods and such use is not to be construed as a warranty that the goods will conform to the sample or model. Furthermore, THE IMPLIED WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE AND ALL OTHER WARRANTIES, IMPLIED OR EXPRESSED, ARE EXCLUDED AND SHALL NOT APPLY. This document provides product options for further investigation by Buyers/Users having technical expertise. The Buyer/User, through its own analysis and testing, is solely responsible for making the final selection of the products and for assuming that all performance, safety and warning requirements for the application are met. It is recommended that Buyers/Users run evaluation tests under actual service conditions to determine whether proposed Bal Seal products are suitable for the intended purpose. Nothing contained herein or in any of our literature shall be considered a license of recommendation for any use that may infringe patent rights (LE-173) TR-60D Rev. 0 (100-99) 08-13-04

This document contains information PROPRIETARY to Bal Seal Engineering and may not be used, reproduced, or disclosed to anyone else, in whole or in part, without the prior written authorization of an officer of Bal Seal Engineering.

1.0 DISCUSSION

These tables list the chemical compatibility chart of various elastomer materials commonly used for o-ring. This data has been compiled from literature published by various material suppliers. It is given as background information only. In any given case, factors such as concentration, temperature, degree of agitation and presence of impurities influence the rate of corrosion. The user, through their own testing and evaluation, must determine the suitability of the material for the application.

2.0 GUIDE TO COMPATIBILITY KEY

Key to O-Ring Material Compatibility Ratings	
(4)	Good, both for static and dynamic seals
(3)	Fair, usually acceptable for static seals
(2)	Sometimes acceptable for static seals; not acceptable for dynamic seals
(1)	Poor
(0)	No Data

3.0 CHEMICAL COMPATIBILITY GUIDE FOR ELASTOMER MATERIALS

In addition to this chemical compatibility chart, report TR-60D, Bal Seal has three other reports: report TR-60A "Chemical Compatibility Guide for Bal Seal PTFE, Filled PTFE, and Polyethylene Seal Materials," report TR-60B "Chemical Resistance to Typical [*HPLC High Pressure Liquid Chromatography*] Solutions, Using Typical Bal Seal Products Used in Such Applications", and TR-60C "Compatibility Guide for Metallic Materials" Consult the Technical Sales Department for further details or materials not listed.
